Description

The TPA178x family is the newest high supply voltage amplifiers with low offset, low power, and stable high-frequency response. These devices incorporate the proprietary and patented design techniques of the 3PEAK to achieve very good AC performance with 10-MHz bandwidth, 20-V/μs slew rate, and low distortion while drawing only 2000 μA of quiescent current per amplifier. The input common-mode voltage range extends to V- and V+, and the outputs swing rail-to-rail. The TPA178x family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve the range and performance of the input and output.

Typical Application Circuit

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R_2 / R_1) + V_{REF}$$

$$\text{When } R_3 = R_1, R_2 = R_4, R_{SHUNT} \ll R_1$$

T _L	Lead Temperature (Soldering, 10 sec)		260	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
- (2) The inputs and outputs are protected by ESD protection diodes to the power supply. If the input or output extends more than 500 mV beyond the positive or negative power supply, the current should be limited to less than 10 mA.
- (3) A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many comparators are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
