

## Features

- Supply Voltage: 3 V to 36 V
- Offset Voltage:  $\pm 3.5 \text{ mV}$  Maximum at  $25^\circ\text{C}$
- Rail-to-Rail Input and Output
- Bandwidth: 4.6 MHz
- Slew Rate:  $3.5 \text{ V}/\mu\text{s}$
- Low Noise:  $53 \text{ nV}/\sqrt{\text{Hz}}$  at 1 kHz
- Zero-Crossover Input:
  - Excellent THD+N: 0.0008 %

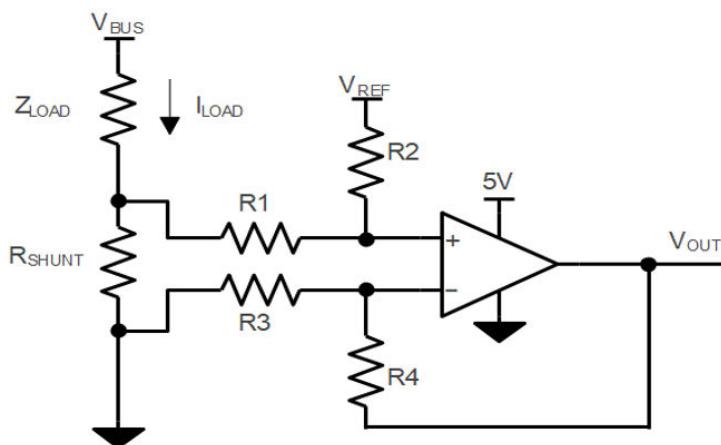

## Applications

- Industrial Control
- Power Supply
- Audio Equipment

## Description

The TPA277x is a series of the newest high-supply-voltage amplifiers with 3.5-mV low-offset voltage, low noise, and stable high-frequency response. The series incorporates proprietary and patented design techniques to achieve excellent AC performance with a 4-MHz bandwidth, a  $3.5 \text{ V}/\mu\text{s}$  slew rate, and low distortion while drawing a quiescent current of 1 mA per amplifier. The input common-mode voltage extends to  $-V_s$  and  $+V_s$ , and the output swings rail-to-rail. The amplifier can be used as a plug-in replacement for commercially available op amps to improve performance.

## Typical Application Circuit

$$V_{\text{OUT}} = (I_{\text{LOAD}} \times R_{\text{SHUNT}}) \times (R_2 / R_1) + V_{\text{REF}}$$

When  $R_3 = R_1$ ,  $R_2 = R_4$ ,  $R_{\text{SHUNT}} \ll R_1$

## Specifications

### Absolute Maximum Ratings (1)

Parameter		Min	Max	Unit
	Supply Voltage, ( $+V_S$ ) – ( $-V_S$ )		40	V
	Input Voltage	( $-V_S$ ) – 0.3	( $+V_S$ ) + 0.3	V
	Input Current: $+I_{IN}$ , $-I_{IN}$ (2)	-10	10	mA
	Output Short-Circuit Duration (3)		Infinite	
$T_J$	Maximum Junction Temperature		150	°C
$T_A$	Operating Temperature Range	-40	125	°C
$T_{STG}$	Storage Temperature Range	-65	150	°C
$T_L$	Lead Temperature (Soldering, 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

(2) The inputs are protected by ESD-protection diodes to the power supply. If the input extends more than 300 mV beyond the power supply, the input current should be limited to less than 10 mA.

(3) A heat sink may be required to keep the junction temperature below the absolute maximum rating. This depends on the power dissipation of the application. The thermal resistance varies with the amount of PC board metal connected to the package.

### ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 (1)	2	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 (2)	1.5	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### Recommended Operating Conditions

Parameter		Min	Typ	Max	Unit
$V_S$	Supply Voltage, ( $+V_S$ ) – ( $-V_S$ )	3		36	V

## Detailed Description

### Overview

The TPA277x is a series of op amps that operate on a single-supply voltage (3 V to 36 V), or a split-supply voltage ( $\pm 1.5$  V to  $\pm 18$  V), making the series highly versatile and easy to use. The power-supply pins should have local bypass ceramic capacitors (typically 0.01  $\mu$ F to 0.1  $\mu$ F). These amplifiers are fully specified from 3 V to 36 V and over the extended temperature range from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ . Parameters that exhibit variance with regard to operating voltage or temperature are presented in [Typical Performance Characteristics](#).

### Functional Block Diagram

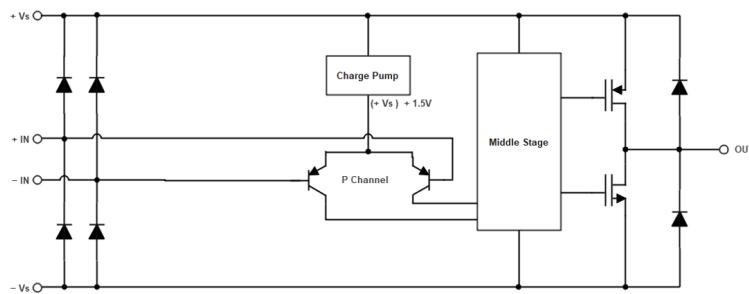

Figure 20. Functional Block Diagram

## Feature Description

### Operating Voltage

The series is designed for single supply operation from 3 V to 36 V or dual supply operation from  $\pm 1.5$  V to  $\pm 18$  V.

The recommended operating voltage conditions are as follows:

Power supply voltage ( $+Vs$ ) – ( $-Vs$ ): 3 V to 36 V. The power supply voltage can support the following three scenarios:

- Single supply;
- Dual supplies with equal voltage values;
- Various voltage configurations, as long as the voltage range of ( $+Vs$ ) – ( $-Vs$ ) is within 3 V to 36 V.

For example, if operating with a single supply, ( $-Vs$ ) = 0 V, ( $+Vs$ ) can support 3 V to 36 V. If using dual supplies with equal absolute values, the minimum voltage is  $\pm 1.5$  V, and the maximum voltage is  $\pm 18$  V. It can even support other voltage configurations, such as ( $-Vs$ ) = 100 V, ( $+Vs$ ) = 136 V, or ( $-Vs$ ) =  $-6$  V, ( $+Vs$ ) = 30 V, and so on.

### Rail-to-Rail Input

The series has a unique zero-crossover input topology to eliminate the input offset transition region, which is brought by the complementary input stage of rail-to-rail input operational amplifiers. The input common-mode range includes negative and positive supplies. CMRR is excellent in all common-mode range and no input stage crossover distortion. When driving ADCs, the highly linear common-mode range of the series assures that the signal conditional system linearity performance is not compromised.

TPA2771/TPA2772/TPA2774

**36-V, 4-MHz, RRIO Operational Amplifier**

#### Rail-to-Rail Output

The series delivers rail-to-rail output swing capability with a novel PSRR-enhanced class-AB output stage. Different load conditions change the ability of the amplifier to swing close to the rails.

## Application and Implementation

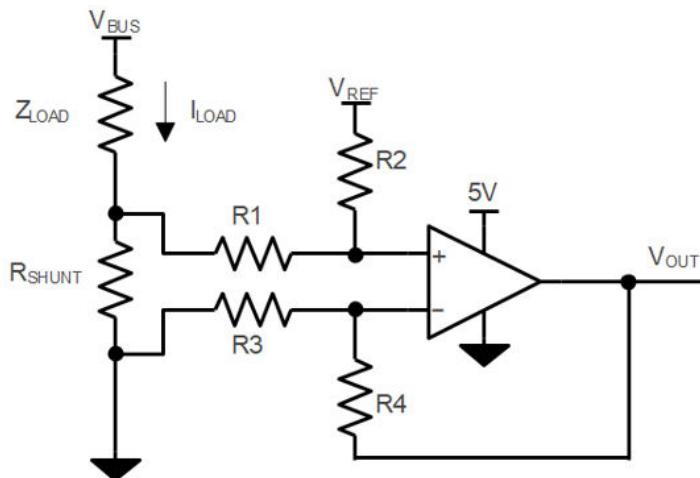

### Note

Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## Application Information

### Low-Side Current-Sensing Application

Figure 21 shows the devices configured in a low-side current-sensing application. The low-side current-sensing method is to place a sense resistor between the load and the circuit ground. The voltage dropping across the resistor is amplified by different amplifier circuits with the devices. The  $V_{REF}$  can be used to add a bias voltage to the output voltage. Particular attention must be paid to the matching and precision of R1, R2, R3, and R4, to maximize the accuracy of the measurement.

$$V_{OUT} = (I_{LOAD} \times R_{SHUNT}) \times (R2 / R1) + V_{REF}$$

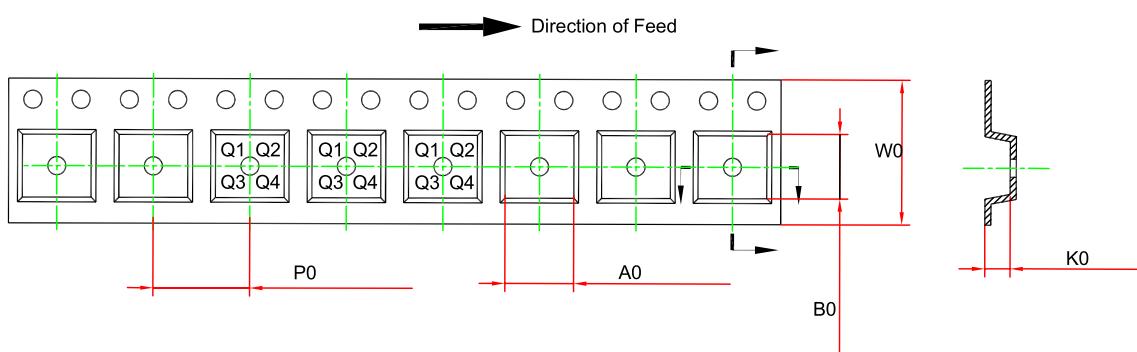

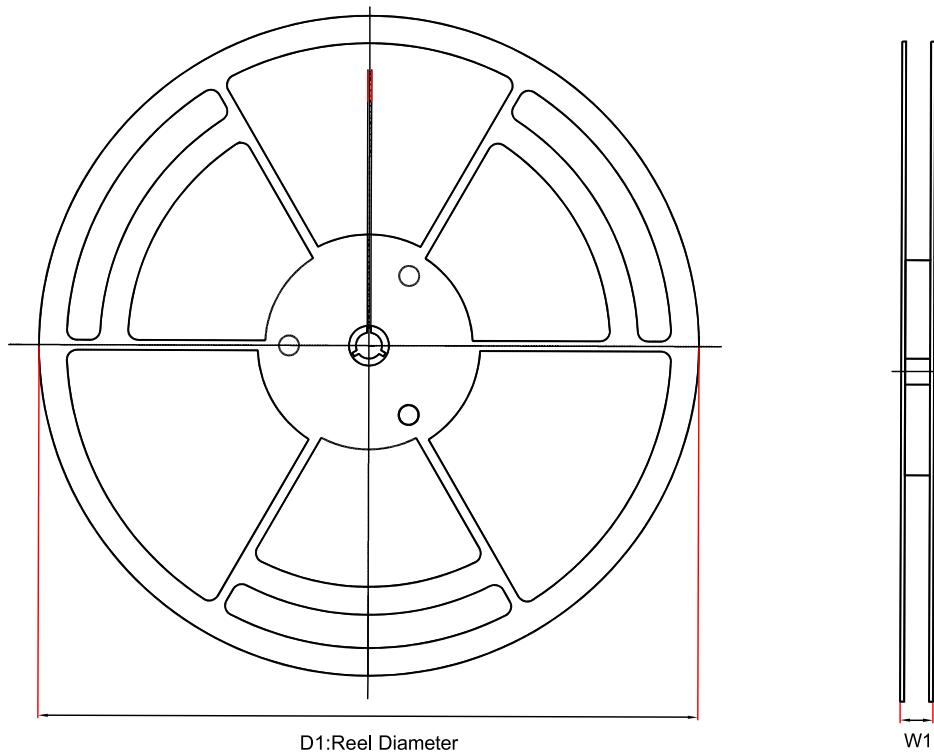

When  $R3 = R1$ ,  $R2 = R4$ ,  $R_{SHUNT} \ll R1$

Figure 21. Low-Side Current-Sensing Application

### Power Supply Recommendations

Place 0.1- $\mu$ F bypass capacitors close to the power supply pins to reduce coupling errors from the noise or high-impedance power supplies.

## Order Information

Order Number	Operating Temperature Range	Package	Marking Information	MSL	Transport Media, Quantity	Eco Plan
TPA2771-S5TR <sup>(1)</sup>	-40 to 125°C	SOT23-5	A36	1	Tape and Reel, 3000	Green
TPA2771U-S5TR-S <sup>(1)</sup>	-40 to 125°C	SOT23-5	A37	1	Tape and Reel, 3000	Green
TPA2772-SO1R	-40 to 125°C	SOP8	A2772	1	Tape and Reel, 4000	Green
TPA2772-VS1R <sup>(1)</sup>	-40 to 125°C	MSOP8	A2772	1	Tape and Reel, 3000	Green
TPA2774-SO2R	-40 to 125°C	SOP14	A2774	1	Tape and Reel, 2500	Green
TPA2774-TS2R <sup>(1)</sup>	-40 to 125°C	TSSOP14	A2774	1	Tape and Reel, 3000	Green

(1) For future products, contact the 3PEAK factory for more information and samples.

**Green:** 3PEAK defines "Green" to mean RoHS compatible and free of halogen substances.

TPA2771/TPA2772/TPA2774

36-V, 4-MHz, RRIO Operational Amplifier
