

Features

- Input Voltage Range: 1.5 V to 5.5 V
- Output Voltage Range:
 - Fixed Output Voltage: 0.75 V to 3.6 V
 - Adjustable Output Voltage: 0.75 V to 5 V
- $\pm 1\%$ Typical Output Accuracy Under Room Temperature
- 300-mA Maximum Output Current
- Low Dropout Voltage: 250 mV Typically at 300 mA
- High PSRR:
 - 70 dB at 1 kHz
 - 54 dB at 1 MHz
- Good Transient Response
- Stable with a 4.7- μ F or Larger Ceramic Output Capacitor
- Inrush Current Control During Startup
- Thermal Shutdown and Over-Current Protection
- Temperature Range: -40°C to $+125^{\circ}\text{C}$
- Package Options:
 - SOT23-5
 - DFN1 \times 1-4

Applications

- Portable and Battery-Powered Equipment
- Mobile Phones and Tablets
- Digital Cameras and Audio Devices Power Supply
- Video Surveillance
- Wireless and IoT Modules

Description

The TPL5031 is a series of 300-mA high PSRR, low noise, and low dropout linear regulators with high output accuracy. The TPL5031 series supports both fixed output voltage ranges from 0.75 V to 3.6 V and adjustable output voltage ranges from 0.75 V to 5 V with an external resistor divider. The TPL5031 is stable with a 4.7- μ F or larger ceramic output capacitor.

The TPL5031 series has a high PSRR with 70 dB at 1 kHz. This feature makes the TPL5031 series very suitable for power-ripple-sensitive applications with high noise from the previous stage power supply, such as high-performance analog devices, or high-definition imaging equipment. The output shortage protection and thermal overload protection circuits improve reliability under heavy load conditions.

The TPL5031 series provides SOT23-5 and DFN1 \times 1-4 packages with a guaranteed operating junction temperature range from -40°C to $+125^{\circ}\text{C}$.

Revision History

Date	Revision	Notes
2020-08-31	Rev.Pre.0	Preliminary version.
2021-06-23	Rev.A.0	Initial released version.
2022-02-15	Rev.A.1	1. Updated the output voltage option and output voltage accuracy. 2. Added the note of V_{DO} .
2024-11-28	Rev.A.2	Updated to a new datasheet format.

Pin Configuration and Functions

Table 1. Pin Functions: TPL5031

Pin No.		Name	I/O	Description
SOT23-5	DFN1×1-4			
3	3	EN	I	The enable pin. Drive EN high to turn on the regulator; drive EN low to turn off the regulator. For automatic startup, connect EN to IN directly.
4	-	FB	I	The output feedback pin (adjustable version only). Connect to a resistor divider to adjust the output voltage.
2	2	GND	-	The ground reference pin. Connect the GND pin to PCB ground plane directly.
1	4	IN	I	The input voltage pin. Bypass IN to GND with a 1- μ F or greater capacitor.
4	-	NC	-	Not connected.
5	1	OUT	O	The regulated output voltage pin. Bypass OUT to GND with a 4.7- μ F or greater capacitor.

Specifications

Absolute Maximum Ratings

Parameter		Min	Max	Unit
IN, EN		-0.3	6	V
OUT		-0.3	6	V
FB		-0.3	6	V
T _J	Maximum Junction Temperature	-40	150	°C
T _{STG}	Storage Temperature Range	-65	150	°C
T _L	Lead Temperature (Soldering, 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.

(2) All voltage values are with respect to GND.

ESD, Electrostatic Discharge Protection

Symbol	Parameter	Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±4	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±1	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Recommended Operating Conditions

Parameter		Min	Max	Unit
IN		1.5	5.5	V
EN		0	5.5	V
OUT		0	5	V

Detailed Description

Overview

The TPL5031 is a series of 300-mA high PSRR, low noise, and low dropout linear regulators with high output accuracy. The TPL5031 series supports both fixed output voltage ranges from 0.75 V to 3.6 V and adjustable output voltage ranges from 0.75 V to 5 V with an external resistor divider. The TPL5031 series is stable with a 4.7- μ F or larger ceramic output capacitor.

The TPL5031 series has a high PSRR with 70 dB at 1 kHz. This feature makes the TPL5031 series very suitable for power-ripple-sensitive applications with high noise from the previous stage power supply, such as high-performance analog devices, or high-definition imaging equipment. The output shortage protection and thermal overload protection circuits improve reliability under heavy load conditions.

Functional Block Diagram

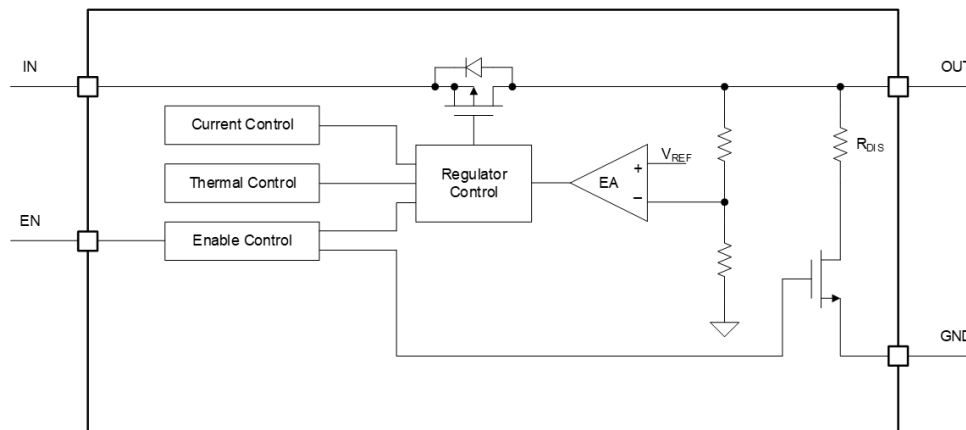

Figure 11. Functional Block Diagram

Feature Description

Enable (EN)

The enable pin (EN) is active high. Connect this pin to the GPIO of an external processor or digital logic control circuit to enable and disable the device. Or connect this pin to the IN pin for self-bias applications.

Regulated Output Voltage (OUT)

The TPL5031 series is available in fixed voltage versions of 0.75 V to 3.6 V. When the input voltage is higher than $V_{OUT(NOM)} + V_{DO}$ or 1.5 V, the output pin is the regulated output based on the selected voltage version. When the input voltage falls below $V_{OUT(NOM)} + V_{DO}$ or 1.5 V, the output pin tracks the input voltage minus the dropout voltage based on the load current.

Current Limit

The TPL5031 series integrates an internal current limit that helps to protect the regulator during over-load fault conditions. When the output is overloaded, the LDO supplies a typical current of I_{CL} . The output voltage is not regulated in the current limit mode, and the output voltage falls to $V_{OUT} = I_{CL} \times R_{LOAD}$.

300-mA Output, High PSRR, Low-Dropout Linear Regulator**Short-Circuit Protection**

The TPL5031 series integrates short-circuit protection. When the output pin is shorted to the ground, the output current of the TPL5031 series is limited to a typical value of I_{SC} .

Thermal Shutdown

During normal operation, the LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shuts down the output immediately. Until the junction temperature falls below the thermal shutdown threshold minus thermal shutdown hysteresis, the output turns on again.

Application and Implementation

Note

Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Application Information

The TPL5031 is a series of 300-mA high PSRR, ultra-low noise, and low-dropout linear regulators. The following application schematic shows a typical usage of the TPL5031 series.

Typical Application

Figure 12 shows the typical application schematic of the TPL5031 series.

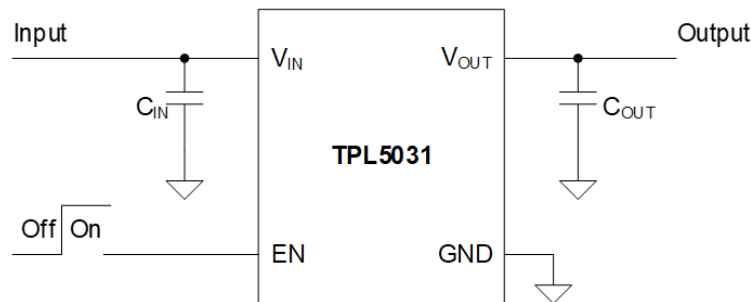

Figure 12. Typical Application Schematic

Input Capacitor and Output Capacitor

3PEAK recommends adding a 1-μF or greater capacitor with a 0.1-μF bypass capacitor in parallel at the IN pin to keep the input voltage stable. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL5031 series requires an output capacitor of 4.7 μF or greater. 3PEAK recommends selecting an X5R- or X7R-type ceramic capacitor with low ESR over temperature.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

Power Dissipation

During normal operation, the LDO junction temperature should not exceed 125°C. Use the below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (1)$$

The junction temperature can be estimated using [Equation 2](#). θ_{JA} is the junction-to-ambient thermal resistance.

$$T_J = T_A + P_D \times \theta_{JA} \quad (2)$$

Layout

Layout Guideline

- Both input capacitors and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to the ground with a 0.1- μ F bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide and thick copper to minimize the $I \times R$ drop and heat dissipation.
