20-V/300-mA Wide-Input High-PSRR Ultra-Low Noise LDO Regulator

Features

- Input Voltage Range: 2.5 V to 20 V
- Output Voltage Range:
  - Adjustable: 1.22 V to 18 V
  - Fixed: 1.5 V to 5 V
- ±2% Output Accuracy over Line Regulation, Load Regulation, and Operating Temperature Range
- 300-mA Maximum Output Current
- Low Dropout Voltage: 550 mV Maximum at 300 mA
- High PSRR:
  - 79 dB at 1 kHz
  - 56 dB at 100 kHz
- 5.68-μV_{RMS} Output Voltage Noise
- Excellent Transient Response
- Stable with a 2.2-µF to 100-µF Ceramic Output Capacitor
- Integrated Protection:
  - Over-Current Protection
  - Output Short-Circuit Protection
  - Over-Temperature Protection
- Junction Temperature Range: −40°C to +125°C
- Package Options:
  - SOT23-5

Applications

- Low-Noise Power Supply
- High-Definition Imaging System
- Infrared Image Equipment
- Medical Equipment

Description

The TPL8032 series of products are 300-mA high PSRR, ultra-low noise, and low-dropout linear regulators with a 20-V wide input voltage range. The TPL8032 series of products support both adjustable output voltage ranging from 1.22 V to 18 V with an external resistor divider and fixed output voltage ranging from 1.5 V to 5 V. The TPL8032 series of products are stable with a 2.2-µF to 100-µF ceramic output capacitor.

The TPL8032 series of products have high PSRR with 79 dB at 1 kHz and 5.68 μV_{RMS} ultra-low noise. These features make the TPL8032 series suitable for noise-sensitive applications, such as high-performance analog devices or high-definition imaging equipment, to suppress the large ripple and noise generated from the previous stage power supply. Besides, output short-circuit protection and thermal protection features improve the system reliability under multiple operating conditions.

The TPL8032 series provides a SOT23-5 package with a guaranteed junction temperature range from –40°C to +125°C.

Pin Configuration and Functions

TPL8032-S
SOT23-5 Package
Top View

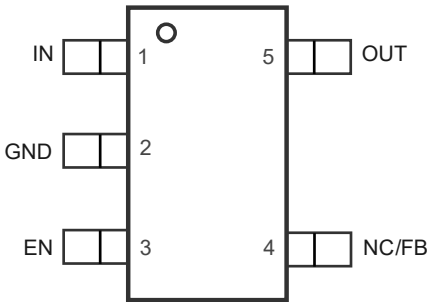

Table 1. Pin Functions: TPL8032-S

Pin No.	Name	I/O	Description
3	EN	I	Regulator enable pin. Drive EN high to turn on the regulator, and drive EN low to turn off the regulator.
4	FB	I	Output voltage feedback pin (adjustable output only). Connect to a resistor divider to adjust the output voltage.
2	GND	–	Ground reference pin. Connect GND pin to PCB ground plane directly.
1	IN	I	Input voltage pin. Connect a 4.7-μF or greater capacitor from IN to GND to reduce the jitter from the previous-stage power supply.
4	NC	–	No connection (fixed output only).
5	OUT	O	Regulated output voltage pin. Connect a 2.2-μF to 100-μF ceramic capacitor from OUT to GND to ensure regulator stability.

Specifications

Absolute Maximum Ratings

Parameter		Min	Max	Unit
V_{IN}, V_{EN}		−0.3	24	V
V_{OUT} (fixed output only)		−0.3	6	V
V_{OUT} (adjustable output only)		−0.3	24	V
V_{FB} (adjustable output only)		−0.3	6	V
T_J	Maximum Junction Temperature	−40	150	°C
T_{STG}	Storage Temperature Range	−65	150	°C
T_L	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
(2) All voltage values are with respect to GND.

ESD, Electrostatic Discharge Protection

Parameter		Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 (1)	±2	kV
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 (2)	±1.5	kV

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Recommended Operating Conditions

Parameter		Min	Max	Unit
V_{IN}		2.5	20	V
V_{EN}		0	V_{IN}	V
C_{OUT}		2.2	100	μF
T_J	Junction Temperature Range	−40	125	°C

Thermal Information

Package Type	θ_{JA}	θ_{JB}	$\theta_{JC,TOP}$	Unit
SOT23-5	162.4	79	62.33	°C/W

Electrical Characteristics

All test conditions: −40°C ≤ T_J ≤ 125°C, V_{IN} = $V_{OUT(NOM)}$ + 1 V or 2.5 V, whichever is greater; typically, T_J = 25°C, V_{OUT} = 3.3 V, C_{IN} = C_{OUT} = 4.7 µF, and C_{FF} = 100 nF for adjustable output, unless otherwise noted.

Parameter		Conditions	Min	Typ	Max	Unit
Supply Input Voltage and Current						
V_{IN} (1)	Input Supply Voltage Range		$V_{IN(MIN)}$		20	V
UVLO	Input Supply Voltage Rising			2.25	2.4	V
	Hysteresis			200		mV
I_Q	Quiescent Current	I_{OUT} = 0 mA		98	160	µA
		I_{OUT} = 1 mA		127		µA
I_{SD}	Shutdown Current	EN = GND, V_{IN} = $V_{IN(MIN)}$ to 20 V		0.6	5	µA
Enable Input Voltage and Current						
$V_{IH(EN)}$	EN Input High Level (enable)		1.6		V_{IN}	V
$V_{IL(EN)}$	EN Input Low Level (disable)		0		0.5	V
I_{EN}	EN Pin Leakage Current	V_{EN} = 0 V to 20 V		0.5	1	µA
Regulated Output Voltage and Current						
V_{OUT} (2)	Output Voltage Accuracy		−2%		2%	
V_{FB} (2)	Feedback Pin Voltage	Adjustable output only		1.22		V
I_{FB} (2)	Feedback Pin Leakage Current	V_{FB} = 1.5 V		100		nA
ΔV_{OUT}	Line Regulation	V_{IN} = $V_{OUT(NOM)}$ + 1 V to 20 V, I_{OUT} = 1 mA		0.007		%/V
	Load Regulation	I_{OUT} = 1 mA to 300 mA		0.01		%/mA
V_{DO} (3)	Dropout Voltage	I_{OUT} = 100 mA, V_{OUT} = 5 V		210	250	mV
		I_{OUT} = 300 mA, V_{OUT} = 5 V		350	550	mV
		I_{OUT} = 100 mA, V_{OUT} = 3.3 V		210	250	mV
		I_{OUT} = 300 mA, V_{OUT} = 3.3 V		350	550	mV
I_{LIM}	Output Current Limit	V_{OUT} = 0.9 × $V_{OUT(NOM)}$	310	450		mA
I_{SC}	Short-Circuit Current Limit	V_{OUT} is forced to ≤ 20 mV		180		mA
PSRR (4)	Power Supply Rejection Ratio	I_{OUT} = 100 mA, f = 120 Hz		79		dB
		I_{OUT} = 100 mA, f = 1 kHz		79		dB
		I_{OUT} = 100 mA, f = 100 kHz		56		dB
		I_{OUT} = 100 mA, f = 1 MHz		41		dB
V_N	Output Noise Voltage (4)	I_{OUT} = 100 mA, BW = 10 Hz to 100 kHz		5.68		μV_{RMS}
t_{STR}	Start-up Time (4)	From EN ≥ $V_{IH(EN)}$ to OUT ≥ 95% of $V_{OUT(NOM)}$		600		µs
Operating Temperature Range						

Parameter		Conditions	Min	Typ	Max	Unit
T_{SD}	Thermal Shutdown Temperature			165		ºC
	Hysteresis			25		ºC

(1) $V_{IN(MIN)}$ = $V_{OUT(NOM)}$ + 1 V or 2.5 V, whichever is greater.
(2) FB pin is available for adjustable output only. Tolerance of external resistors is not included.
(3) Dropout voltage is the minimum input to output voltage differential needed to maintain regulation at a specified output current and measure for $V_{OUT(NOM)}$ ≥ 2.5V. In the dropout mode, the output voltage will be equal to V_{IN} − V_{DO}.
(4) Not test during production. Measured with C_{OUT} = 2.2 μF.

Typical Performance Characteristics

All test conditions: −40°C ≤ T_J ≤ 125°C, V_{IN} = $V_{OUT(NOM)}$ + 1 V or 2.5 V, whichever is greater; typically, T_J = 25°C, V_{OUT} = 3.3 V, C_{IN} = 4.7 µF, C_{OUT} = 2.2 µF, and C_{FF} = 100 nF for adjustable output, unless otherwise noted.

Detailed Description

Overview

The TPL8032 series of products are 300-mA high PSRR, ultra-low noise, and low-dropout linear regulators with a 20-V wide input voltage range. The TPL8032 series of products support both adjustable output voltage ranging from 1.22 V to 18 V with an external resistor divider and fixed output voltage ranging from 1.5 V to 5 V. The TPL8032 series of products are stable with a 2.2-µF to 100-µF ceramic output capacitor.

The TPL8032 series of products have high PSRR with 79 dB at 1 kHz and 5.68 μV_{RMS} ultra-low noise. These features make the TPL8032 series suitable for noise-sensitive applications, such as high-performance analog devices or high-definition imaging equipment, to suppress the large ripple and noise generated from the previous stage power supply. Besides, output short-circuit protection and thermal protection features improve system reliability under multiple operating conditions.

Functional Block Diagram

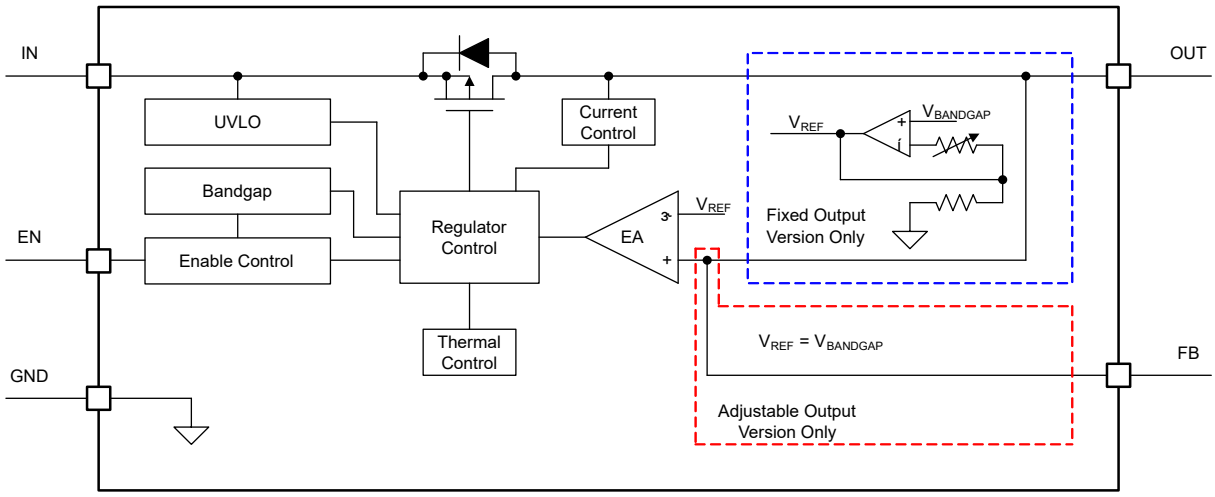

Figure 17. Functional Block Diagram

Feature Description

Enable (EN)

The enable pin (EN) is active high. Connect this pin to the GPIO of an external processor or digital logic control circuit to enable and disable the device. Or connect this pin to the IN pin for self-bias applications.

Under-Voltage Lockout (UVLO)

The TPL8032 series uses an under-voltage lockout circuit to keep the output shut off until the internal circuitry operates properly. Refer to the Electrical Characteristics table for the UVLO threshold and hysteresis.

Fixed Output Voltage

The TPL8032 series is available in fixed voltage versions of 1.5 V to 5 V. When the input voltage is higher than $V_{OUT(NOM)}$ + 1 V, the output voltage is well regulated according to the selected voltage option. When the input voltage falls below $V_{OUT(NOM)}$ + 1 V, the output voltage tracks the input voltage minus the dropout voltage according to the load current. When the input voltage falls below UVLO, the output turns off.

Adjustable Output Voltage (FB and OUT)

The output voltage of the TPL8032 series with the FB pin can be set from 1.22 V to 18 V by selecting different external resistors. Use Equation 1 to calculate the output voltage.

$$V_{OUT} = V_{FB} \times \left(1 + \frac{R1}{R2}\right) \quad (1)$$

Where the feedback voltage VFB is 1.22 V.

Over-Current Protection and Short-to-Ground Protection

The TPL8032 series integrates an internal current limit that helps to protect the regulator during fault conditions.

- When the output voltage is pulled down below the regulated voltage, over-current protection starts to work and limits the output current to I_{LIM}.
- When the output voltage is pulled down below 20 mV, or shorted to the ground directly, short-to-ground protection starts to work and limits the output current to I_{SC}.
- During startup, the output current is limited to I_{SC} before the output voltage ramps higher than the short-to-ground threshold.

Under the over-current conditions, the internal junction temperature ramps up quickly. When the junction temperature is high enough, it will cause over-temperature protection.

Over-Temperature Protection

The over-temperature protection starts to work when the junction temperature exceeds the thermal shutdown threshold, which turns off the regulator immediately. Until when the device cools down and the junction temperature falls below the thermal shutdown threshold minus thermal shutdown hysteresis, the regulator turns on again.

The junction temperature range should be limited according to the Recommended Operating Conditions table, continuously operating above the junction temperature range will reduce the device lifetime.

Application and Implementation

> Note
>
> Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Application Information

The TPL8032 devices are a series of 20-V, 300-mA high PSRR, ultra-low noise, low-dropout linear regulators. The following application schematics show the typical usage of the TPL8032 series.

Typical Application

Figure 18 and Figure 19 show the typical application schematics of the TPL8032 series.

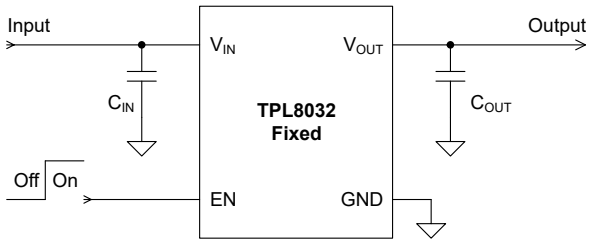

Figure 18. Typical Application Schematic of Fixed Output

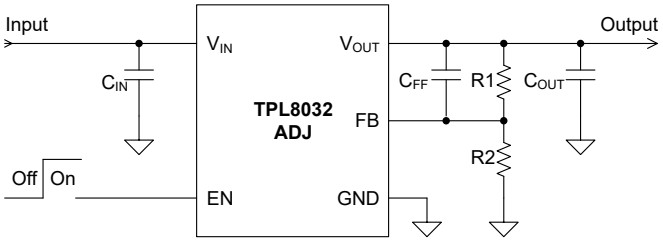

Figure 19. Typical Application Schematic of Adjustable Output

Input Capacitor and Output Capacitor

3PEAK recommends adding a 4.7-μF or greater capacitor with a 0.1-μF bypass capacitor in parallel at the IN pin to keep the input voltage stable. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL8032 series requires an output capacitor of 2.2 μF to 100 μF. 3PEAK recommends selecting an X7R type 4.7-μF ceramic capacitor with the low ESR over temperature.

Both input capacitors and output capacitors must be placed as close to the device pins as possible.

Power Dissipation

During normal operation, LDO junction temperature should meet the requirement in the Recommended Operating Conditions table. Using the below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using Equation 2.

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (2)$$

The junction temperature can be estimated using Equation 3 . θ_{JA} is the junction-to-ambient thermal resistance.

$$T_J = T_A + P_D \times \theta_{JA} \quad (3)$$

Layout

Layout Guideline

- Both input capacitors and output capacitors must be placed to the device pins as close as possible.
- It is recommended to bypass the input pin to ground with a 0.1-μF bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide and thick copper to minimize I×R drop and heat dissipation.
