

Features

- Input Voltage Range: 1.75 V to 5.5 V
- Output Voltage Range: 0.9 V to 5 V
- $\pm 2.5\%$ Output Accuracy Over Line, Load Regulation, and Operating Temperature Range
- 500-mA Maximum Output Current
- Low Dropout Voltage: 150 mV typical at 500 mA
- High PSRR:
 - 82 dB at 1 kHz
 - 88 dB at 10 kHz
 - 61 dB at 100 kHz
 - 45 dB at 1 MHz
- 8.6- μV_{RMS} Output Voltage Noise
- Excellent Transient Response
- Stable with a 1- μF or Greater Ceramic Output Capacitor
- Output Reverse Current Protection
- Output Shortage Protection
- Over-Temperature and Over-Current Protection
- Junction Temperature Range: -40°C to $+125^{\circ}\text{C}$
- Package Options:
 - SOT23-5
 - DFN1X1-4

Applications

- Portable and Battery-Powered Equipment
- Mobile Phones and Tablets
- Digital Cameras and Audio Devices Power Supply
- Video Surveillance

Description

The TPL9052 is a series of 500-mA high-PSRR, ultra-low noise, and low-dropout linear regulators with high-output accuracy. The TPL9052 series supports both fixed output voltage ranging from 0.9 V to 5 V and is stable with 1- μF or larger ceramic output capacitors.

The TPL9052 series has high PSRR with 88 dB at 10 kHz and 8.6- μV_{RMS} ultra-low noise. These features make the TPL9052 series very suitable for noise-sensitive applications with high noise from the previous stage power supply, such as high-performance analog devices, or high-definition imaging equipment.

The TPL9052 series integrates protection features: output reverse current protection, output shortage protection, over-temperature protection, and overload protection. All these features significantly improve system reliability and simplify the circuitry design under different operating conditions.

The TPL9052 series provides SOT23-5 and DFN1X1-4 packages with guaranteed operating junction temperature (T_J) ranging from -40°C to $+125^{\circ}\text{C}$.

Pin Configuration and Functions

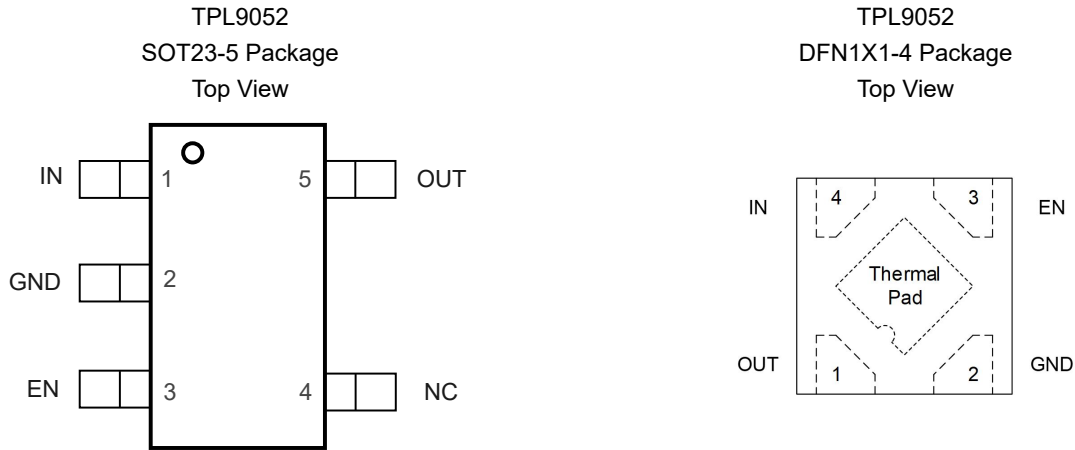

Table 1. Pin Functions: TPL9052

Pin No.		Name	I/O	Description
SOT23-5	DFN1X1-4			
3	3	EN	I	Regulator enable pin. Drive EN high to turn on the regulator; drive EN low to turn off the regulator. For automatic startup, connect EN to IN directly.
2	2	GND	–	Ground reference pin. Connect the GND pin to the PCB ground plane directly.
1	4	IN	I	Input voltage pin. Bypass IN to GND with a 1- μ F or greater capacitor.
4	–	NC	–	No connection.
5	1	OUT	O	Regulated output voltage pin. Bypass OUT to GND with a 1- μ F or greater capacitor.

(1) Thermal Pad **MUST** be connected to PCB ground plane directly.

Specifications

Absolute Maximum Ratings

Parameter		Min	Max	Unit
IN, EN		-0.3	6	V
OUT		-0.3	6	V
T _J	Junction Temperature Range	-40	150	°C
T _{STG}	Storage Temperature Range	-65	150	°C
T _L	Lead Temperature (Soldering 10 sec)		260	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device.

(2) All voltage values are with respect to GND.

ESD, Electrostatic Discharge Protection

Parameter		Condition	Minimum Level	Unit
HBM	Human Body Model ESD	ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±6000	V
CDM	Charged Device Model ESD	ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±1500	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

Recommended Operating Conditions

Parameter		Min	Max	Unit
IN		1.75	5.5	V
EN		0	V _{IN}	V
OUT		0	5.5	V
C _{OUT}		1	10	μF
ESR of C _{OUT}		0.001	0.1	Ω
T _J	Junction Temperature Range	-40	125	°C
P _D	Power Dissipation	0	400	mW

Thermal Information

Package Type	θ _{JA}	θ _{Jc}	Unit
SOT23-5	280	62	°C/W

	Thermal Shutdown Hysteresis			15		°C

(1) Dropout voltage is the minimum input-to-output voltage differential needed to maintain regulation at a specified output current and measure for $V_{OUT(NOM)} \geq 1.8$ V. In the dropout mode, the output voltage will be equal to: $V_{IN} - V_{DROPOUT}$.

Typical Performance Characteristics

All test conditions: $V_{IN} = V_{OUT(NOM)} + 1\text{ V}$, $I_{OUT} = 1\text{ mA}$, $C_{IN} = 1\text{ }\mu\text{F}$, $C_{OUT} = 1\text{ }\mu\text{F}$, $-40^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$, unless otherwise noted.

Detailed Description

Overview

The TPL9052 is a series of 500-mA high-PSRR, ultra-low noise, low-dropout linear regulators with high-output accuracy. The TPL9052 series supports both fixed output voltage ranging from 0.9 V to 5 V and is stable with 1- μ F or larger ceramic output capacitors.

The TPL9052 series has high PSRR with 88 dB at 10 kHz and 8.6- μ V_{RMS} ultra-low noise. These features make the TPL9052 series very suitable for noise-sensitive applications with high noise from the previous stage power supply, such as high-performance analog devices, or high-definition imaging equipment.

The TPL9052 series integrates protection features: output reverse current protection, output shortage protection, over-temperature protection, and overload protection. All these features significantly improve the system reliability and simplify circuitry design under different operating conditions.

Functional Block Diagram

Figure 13. Functional Block Diagram

Feature Description

Enable (EN)

The enable pin (EN) is active high. Connect this pin to the GPIO of an external processor or digital logic control circuit to enable and disable the device. Or connect this pin to the IN pin for self-bias applications.

Operating Voltage Range (V_{IN})

The TPL9052 series does not include any dedicated UVLO circuitry. The output voltage of the TPL9052 series is not well regulated until V_{IN} exceeds 1.75 V or ($V_{OUT} + V_{DO}$), whichever is greater.

Regulated Output Voltage (V_{OUT})

The TPL9052 series is available in fixed voltage versions of 0.9 V to 5 V. When the input voltage is higher than $V_{OUT(NOM)} + 1$, the output pin is the regulated output based on the selected voltage version. When the input voltage falls below $V_{OUT(NOM)} + 1$, the output pin tracks the input voltage minus the dropout voltage based on the load current.

Reverse-Current Protection (RCP)

The TPL9052 series provides reverse-current protection (RCP) to prevent the output reverse current. If large capacitors are used at the output, there would be a large reverse current when the input voltage is lower than the output voltage. The TPL9052 series can shut off the regulator and body diode path to prevent the device from being damaged due to reverse current faults.

Current Limit

The TPL9052 series integrates an internal current limit that helps to protect the regulator during fault conditions. When the output is shorted, the LDO supplies a typical current of 100 mA. The output voltage is not regulated when the device is in current limit, and $V_{OUT} = I_{CL} \times R_{LOAD}$.

Thermal Shutdown

During normal operation, the LDO junction temperature should not exceed 125°C. When the junction temperature exceeds the thermal shutdown threshold, the LDO shuts down the output immediately. When the junction temperature falls below a value, which equals to thermal-shutdown threshold minus thermal-shutdown hysteresis, the output turns on again.

Application and Implementation

Note

Information in the following application sections is not part of the 3PEAK's component specification and 3PEAK does not warrant its accuracy or completeness. 3PEAK's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

Application Information

The TPL9052 is a series of 500-mA high-PSRR, ultra-low noise, low-dropout linear regulators. The following application schematic shows a typical usage of the TPL9052 series.

Typical Application

Figure 14 shows the typical application schematic of the TPL9052 series.

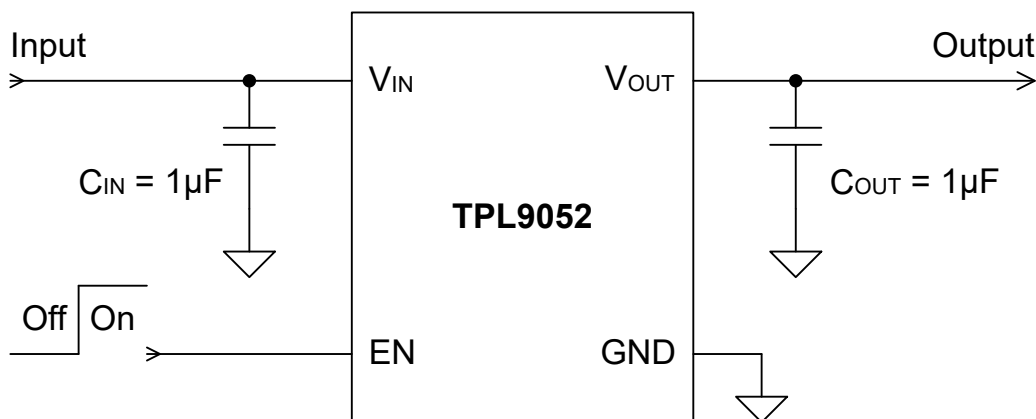

Figure 14. Typical Application Circuit

Input Capacitor and Output Capacitor

3PEAK recommends adding a 1-µF or greater capacitor with a 0.1-µF bypass capacitor in parallel at the IN pin to keep the input voltage stable. The voltage rating of the capacitors must be greater than the maximum input voltage.

To ensure loop stability, the TPL9052 series requires an output capacitor of 1 µF or greater. 3PEAK recommends selecting an X5R- or X7R-type ceramic capacitor with low ESR over temperature.

Both input and output capacitors must be placed as close to the device pins as possible.

Power Dissipation

During normal operation, the LDO junction temperature should not exceed 125°C. Use the below equations to calculate the power dissipation and estimate the junction temperature.

The power dissipation can be calculated using [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (1)$$

The junction temperature can be estimated using [Equation 2](#). θ_{JA} is the junction-to-ambient thermal resistance.

$$T_J = T_A + P_D \times \theta_{JA} \quad (2)$$

Layout

Layout Guideline

- Both input and output capacitors must be placed as close to the device pins as possible.
- It is recommended to bypass the input pin to ground with a 0.1- μ F bypass capacitor. The loop area formed by the bypass capacitor connection, the IN pin, and the GND pin of the system must be as small as possible.
- It is recommended to use wide and thick copper to minimize $I \times R$ drop and heat dissipation.
