

Features

- 7-channel Darlington Array
- 500-mA Rated Drain Current (Per Channel)
- Very Low Output Leakage < 10 nA Per Channel
- Power Efficient with Low R_{DS-on}
- Extended Temperature Range: $T_A = -40^\circ\text{C}$ to 125°C
- High-Voltage Outputs: 40 V
- Compatible with 1.8-V to 5.0-V Logic Interface
- Integrated Free-wheeling Diodes for Inductive Load
- Improved Noise-immunity with integrated RC filter
- Enhanced ESD Protection Exceeds JESD 22 – 2.5-kV HBM, 1.5-kV CDM
- Available in SOP16 and TSSOP16 Packages

Applications

- Inductive Loads
 - Relays
 - Unipolar Stepper & Brushed DC Motors
 - Solenoids & Valves
- LED Indicators
- Logic Level Shifting
- Gate & IGBT Drive

Description

The TPM2003 is a high-voltage, high-current NMOS transistor array. This device consists of seven channels of low-side NMOS transistors with high-voltage outputs and free-wheeling diodes for inductive loads.

The maximum drain-current rating of a single NMOS channel is 500 mA. The device supports a wide I/O voltage range from 1.8 V to 30 V. The transistors can drive in parallel for higher current capability. Enhanced ESD performance enhances system-level reliability.

The TPM2003 can replace traditional Bipolar Darlington arrays with better thermal efficiency and reliability.

Specifications

Absolute Maximum Ratings (1)

| Parameter | | Min | Max | Unit |
|------------------|---|------|-----|------|
| | Power Supply Voltage, COM | -0.3 | +45 | V |
| | Output Voltage Range OUT1 – OUT7 | -0.3 | +45 | V |
| | Input Voltage Range IN1 – IN7 | -0.3 | +30 | V |
| | Continuous Output Channel Current OUT1 – OUT7 | | 500 | mA |
| | Continuous Ground Current GND-pin | | 2 | A |
| T _J | Operating Junction Temperature Range | -40 | 125 | °C |
| T _{STG} | Storage Temperature Range | -65 | 150 | °C |
| T _L | Lead Temperature (Soldering, 10 sec) | | 260 | °C |

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
 (2) The inputs are protected by ESD protection diodes to each power supply. If the input extends more than 300 mV beyond the power supply, the input current should be limited to less than 10 mA.
 (3) Power dissipation and thermal limits must be observed.

ESD, Electrostatic Discharge Protection

| Parameter | | Condition | Minimum Level | Unit |
|-----------|--------------------------|------------------------|---------------|------|
| HBM | Human Body Model ESD | ANSI/ESDA/JEDEC JS-001 | ±2.5 | kV |
| CDM | Charged Device Model ESD | ANSI/ESDA/JEDEC JS-002 | ±1.5 | kV |

Recommended Operating Conditions

| Parameter | | Min | Max | Unit |
|-----------|-------------------------------------|-----|-----|------|
| | Power Supply Voltage, COM | 4.3 | 40 | V |
| | Output Voltage Range OUT1 – OUT7 | 0 | 40 | V |
| | IN Logic-low Voltage | | 0.9 | V |
| | IN Logic-high Voltage | | 1.5 | V |
| | Continuous Output Current OUT1-OUT7 | | 500 | mA |
| | Operating Ambient Temperature Range | -40 | 125 | °C |

Thermal Information

| Package Type | θ _{JA} | θ _{JC} | Unit |
|--------------|-----------------|-----------------|------|
| TSSOP16 | 114.5 | 50.5 | °C/W |
| SOP16 | 84.3 | 30.5 | °C/W |

Detailed Description

Overview

The TPM2003 is a high-voltage, high-current NMOS transistor array. This device consists of seven channels of low-side NMOS transistors with high-voltage outputs and free-wheeling diodes for inductive loads.

The maximum drain-current rating of a single NMOS channel is 500 mA. The device supports a wide I/O voltage range from 1.8 V to 30 V. The transistors can drive in parallel for higher current capability. Enhanced ESD performance enhances system-level reliability.

Functional Block Diagram

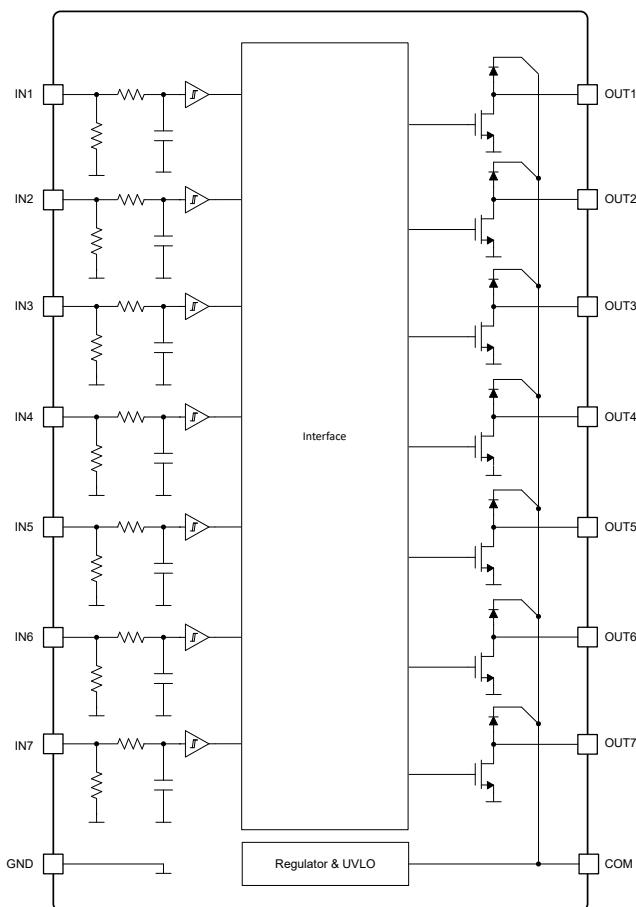

Figure 11. Functional Block Diagram

Feature Description

For each channel, the input pin INx controls the output. When INx is logic high, the output transistor is on. When INx is logic low, the output transistor is off. The devices use power from the COM pin to bias internal circuits with an internal low-dropout linear regulator. The power transistor delivers current with low $R_{DS(ON)}$ to improve system-level efficiency. To improve system level reliability, the TPM2003 has integrated R-C filter to avoid noise on INx. INx can also support maximum 30-V high voltage input for industrial systems.
